

HOLOGRAM SCREEN

5

ABSTRACT OF THE DISCLOSURE

10 A hologram screen easily produced by using a
transmission-type hologram film, permitting images to be
seen from the side of the projector, having a transparent
member 11 and a hologram film 12 stuck to the transparent
member 11, and produces the image by projecting image-
forming light 3 from the projector 2, the hologram film
12 being of the transmission-type, a reflector 13 for
15 reflecting the image-forming light 3 being arranged on
the back surface side 122 of the hologram film 12.
